No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                               1 agcacgtcccactctatgac......tgcttgagaaaaaaaaa 2555

Sequences AAF59590-AAF59643 represent cDNAs encoding 54 human cell cycle and proliferation proteins (CCYPR), AAB60453-AAB60506.

CCYPR and agonists of CCYPR are used to treat diseases or conditions associated with decreased expression of functional CCYPR, while CCYPR antagonists are used to treat diseases or conditions associated with overexpression of functional CCYPR, Monoclonal CCYPR, while CCYPR any be used in enzyme-linked immunosorbent associated with corpromise or corpromise. Corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise. Corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise. Corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromise or corpromi Human cell cycle and proliferation proteins and polynucleotides are used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer Claim 5; Page 190-191; 205pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 287

                                                                                                                  2460
                                                                                                                                            2687
                                                                                                                                                             The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arteriosolerosis and myocardial ischaemia), neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating thrombosis and arteriosclerosis, for treating thrombosis and arteriosclerosis, for treating entendosis and arteriosclerosis, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                         Cardiant; antiarrhythmic; antiarteriosclerotic; vasotropic; cytostatic; vulnerary; antiinflammatory; nootropic; neuroprotective; antiparkinsonian; gene therapy; human; cardiovascular disorder;

ABZ71190-ABZ7147B represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. ABZ71479-ABZ71540 represent human secreted proteins they encode. ABZ71479-ABZ71540 represent human secreted proteins described by the secreted proteins and encompasses antibodies specific for the secreted proteins. The record of the secreted proteins in drug screening, and recombinant or vectors and host cells comprising a mucleic acid of the invention. The secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliocating or preventing destrive disorders. Such conditions include disorders of the mouth, compasses and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the reatment of immune disorders, inflammation, infection, chromosome control seamless, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute markers. The present sequence represents a human secreted protein- and arkers. The present sequence represents a human secreted protein- and samples, and an arkers. The present sequence represents a human secreted protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1074

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB8040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, reatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune (c) immune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoardial ischamias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Or printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the pertipheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scalerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic

Human transmembrane protein cDNA clone amy2\_li14.

Human, foetal brain, foetal kidney, melanoma, testis, amygdala, gene therapy, chromosome 22q13.31-13.33; ss.

fetal genetic Human cDNA sequences and clones derived from human fetal brain, kidney, melanoma, testis and amygdala cDNA libraries, useful in screening and therapy -

arrays the media from The present invention describes assemblages and computer readable recomprising novel human CDNA sequences and clones derived from human comprising novel human CDNA sequences and clones derived from human foctal brain, foetal kidney, melanoma, testis and amygdala CDNA libraries. ABA93702 to ABA9376 represent human CDNA sequences from present invention which encode the proteins given in ABB05562 to ABB05729. The human conde the proteins given in ABB0562 to therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large of human genetic meterial for implementing large-scale screening strategies and for treating diseases via gene therapy procedures.

It is an example of claimed isolated nucleic acids (see AAZ94077-Z94131) that are specifically expressed in hammatopoietic stem cells (HSCs) and which encode HSC-specific proteins. The HSCs are especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       monge;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                929
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
primitive HSCs (PHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins (see AAY9176-93) are growth factors, transcription factors, splicing factors, capping factors, transport proteins, translation factors or replication factors that modulate HSC activity, especially differentiation or replication. The invention provides a claimed method for identifying PHSC-specific nucleic acids involving: creating a PHSC cDNA library and a non-PHSC immune cell library; and subtracting the 2 libraries. Also claimed are methods: for generating a stem cell/progenitor cell-from PHSCs; for identifying the presence of a PHSC in a sample; for identifying the presence in a sample of a compound that modulates HSC activity; for using such a compound to treat an immune system condition, especially laukaemia; for introducing exogenous nucleic acid into a HSC; and for ex vivo expansion of HSCs. Also claimed is a PHSC specifically expressing 1 of the claimed nucleic acids, such as the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1389 raaaagaagtagaccagagtigaagaarggtrcaaagaagaargaartgaaatragaagcrarac

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from a patient. The method involves contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polymucleotide sequences given in the specification. These candiogenesis associated polymucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polymucleotide sequences of the invention are useful for diagnosing and treating angiogenesis associated diseases e.g. cancer. The polymucleotide sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polymucleotide capiences are useful as a vaccine for therapeutic and prophylactic immunisation, ABXO8813 represent angiogenesis-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241 ACCAAAGTCTTCTGGATTGCTGGAATTGTAAAATTAGCAGGTTACAATGCCCTTTTAAGA

polypeptide encoded by a polymucleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II).

(I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's bloidgical sample professional to a patient with (IV), detecting the amount of polymucleotide hybridising to (IV) and comparing the amount to patient where the amount of polymucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PRN). (I) comprising catered preferably by polymerase chain reaction (PRN). (I) comprising context of (III) and/or (III) is useful for stimulating and/or expanding T cells with (III) or (II). (III) is useful in design and preparation of the tumour polymetrial in the trimulating expression of the tumour polymetrial context in the unique replace of the tumour polymetrial profession of the tumour polymetrial context in the library e.g., a tumour cDNA library using well known

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20
              This invention describes novel human nucleic acid segments (I) containing polymorphic sites. The polymucleotides of (I) are used for, e.g. correlating disease polymorphisms (or disease succeptibility) or other phenotypic traits (e.g. baldness, obssity, fertility, strength, response to drugs etc.); diagnosing and monitoring e.g. cancer, inflammation, heart or central nervous system diseases; detecting susceptibility to microbial infection; treating or preventing such diseases; forensic analysis; gene therapy, paternity testing; mapping genomic loci associated with phenotypic traits (and subsequent cloning
                                                                                                                                                                                                of the genes responsible); and the production of transgenic organisms. Antibodies raised against (I) are useful as diagnostic and therapeutic tools and in drug screening. AAH85144 - AAH87644 represent the human DNA sequences containing biallelic polymorphic sites described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                             2180 TTTGTGAGGACTGACTCCC--ATTTCCTAAAGGAAATGCCCCCGGGGAGGACATTGGGAG
